General Information

All the flowers can be customised to a colour of your choice, please contact me to discuss. All sizes approximate due to being individually handmade.

They come complete with a copper pipe stand to which are attached with a separate spike. The center is detachable, this again can be a colour of your choice.

When placing your flower make sure that the spike goes into the ground at least 25 cm /10 inches to keep it secure. The copper pipe is then slotted into the spike. The flowers are designed to encourage slight movement giving it a more "natural" feel and you can bend the copper pipe to the position you want, but please take care not to kink the pipe,

The flowers can be kept outside all year to provide colour even when your garden has died back in the winter. We recommend that you bring them in if the weather is extreme, for example heavy snow, high winds and extreme frost.

Please do not leave the water lily in the pond in the winter if the water freezes

To clean the flowers, gently remove the magnetic centre and wash with warm water and soap

To appreciate the flowers true colours please come and visit our studio and garden where they are on display all year.

Flowers can be posted but there will be postal charges

Please phone before visiting
